

GOSS TRILINER

Triliner™ technology converts two-pages-around newspaper presses to print three pages around, allowing publishers to save paper, increase productivity and color capacity, maintain broadsheet advantages and accommodate standard-size advertising inserts. Plate cylinders are modified to accept single plates around the entire circumference. A Goss folder delivers off-center folds, and straight-forward modifications to Goss mailrooms allows postpress systems to process the smaller, asymmetrically folded papers. Equipping a press with two folders provides the versatility to produce both two-around and three-around products by varying the number of pages imaged onto the single-around plates.

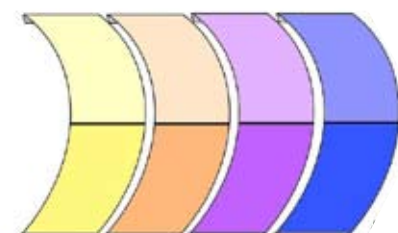

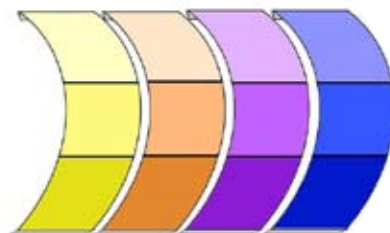

Sample product: 22" cutoff press

Features

- Three-pages-around compact broadsheet newspaper printing
- Retrofit or new press option for any double-circumference system
- Single plate lockup
- Off-center fold accommodates standard inserts
- Paper savings: reduces cutoff by one-third
- Fifty-percent increase in copies per hour in straight production
- Fifty-percent increase in color pages in collect production
- Maintain broadsheet sectioning advantages
- Product cutoffs proportional to reduced widths
- Non-disruptive retrofit process
- Proven triple-collect folder technology
- Corresponding postpress solutions

With Goss Triliner technology, lock-ups are modified to accommodate single plates around the double-circumference cylinders, allowing three shorter pages (left) or the traditional two pages (right) to be printed.
