

# GOSS ECOBOX

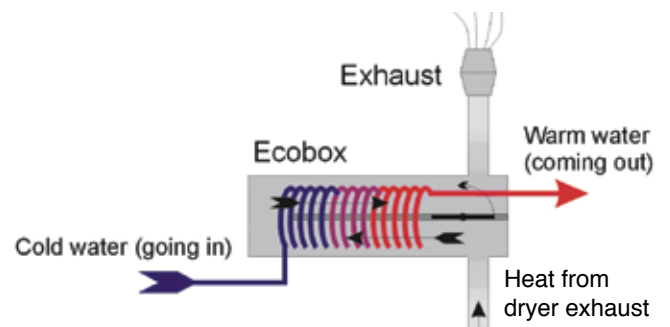

Recover energy from your Goss Ecotherm or Ecocool/T dryer. The recovered energy can be used to produce hot water, hot air, steam, chilled water or plant air conditioning.

Ecobox is a proven design with over 90 units installed. It has a compact profile and will not take up any additional floor space.

### How it works:

- The Ecobox heats water by using exhaust air from the dryer. The temperature of the heated water can be regulated by the customer.
- When not all available energy is needed, the exhaust air is directly led into the chimney by means of a bypass valve.

	<b>Ecobox</b>	
	<b>Easy installation</b>	No major modifications to the dryer are necessary. Minimal down time
	<b>Save money on heating and cooling</b>	Energy can be used to reduce gas and electrical usage
	<b>Environmental benefits</b>	Reduce CO <sup>2</sup> emissions Reduce fuel and electrical usage Reduce your carbon footprint Achieve green printing status
